TECHNICAL SKILLS

Languages: Swift, Java, Python (AsyncIO, Pandas, FastAPI), C#/.NET, TypeScript, JavaScript, SQL, C++, HTML/CSS.

Mobile & Web: SwiftUI, UIKit, Android Studio, React, React Native, Node.js, REST APIs, Firebase, Supabase.

Web & Infrastructure: Docker, CI/CD (GitHub Actions, Fastlane), Git, Linux, OAuth 2.0, Celery.

Core Concepts: SDLC, Agile/Scrum, WCAG/AODA Accessibility, ETL Pipelines, Object-Oriented Design, Protocol-Oriented Architecture.

WORK EXPERIENCE

Collins Aerospace, Software Engineer 2/Sr. Analyst

Dec 2022 – Present

- Architected and developed a full-stack web application (JavaScript/Python) that automated radio configuration and testing, reducing engineering time by 30%.
- Implemented NATO STANAG 4358 3G and VITA49.2 protocol standards in radio codebase, optimizing bit/byte manipulation and packet formatting while maintaining backward compatibility.
- Engineered critical C++ 3G/4G radio features compliant with universal specifications, resulting in successful field deployments across multiple platforms.
- Designed and implemented CI/automated C# testing pipelines that streamlined the development lifecycle, reduced system downtime by 25%, and accelerated bug resolution.
- Created an internal tool for automated release artifact generation that was adopted company-wide, saving 10+ hours per release cycle.

Fortinet, iOS Software Developer

May 2022 – Dec 2022

- Spearheaded iOS development for an enterprise chat application, delivering full-stack features in Swift, C++, and Objective-C with seamless backend integration (ejabberd, MVC).
- Designed and implemented core iOS group chat functionality (invites, user management, room interactions) that accelerated product release and increased user engagement by 40%.
- Collaborated closely with the Android developer to align feature parity, shared API contracts, and coordinated cross-platform releases for simultaneous iOS/Android deployments.

Kinaxis, Back End Software Engineer Intern

Jan 2022 – May 2022

- Diagnosed/resolved critical customer-reported issues in RapidResponse platform (95% satisfaction rating) while developing backend initiatives (.NET, C++) that integrated cloud logging services, improving system performance by 35% and enhancing platform stability.

Electronic Arts (EA), FIFA, Software Engineer Intern

Sep 2020 – Apr 2021

- Implemented gameplay features and resolved defects for FIFA 21/FIFA 22 across multiple platforms.
- Managed biweekly content updates and deployments for FIFA Ultimate Team, serving millions of active users.

Solace, Software Developer Intern (C++/PERL)

May 2019 – Sep 2019

PROJECTS

DeenPath | Lifestyle & Production iOS App

Tech Stack: Swift, SwiftUI, Combine, Firebase (Auth, FCM, Remote Config), StoreKit 2, WidgetKit, ActivityKit, Node.js

- Architected and shipped a full-featured iOS app (live on App Store) with real-time location-aware computation engine supporting multiple calculation configurations, offline-first caching with 24-hour expiration and background refresh, intelligent text search with synonym expansion and cross-language query mapping, AI insight on search, a Node.js content ingestion pipeline backed by Supabase, and PDF document generation with locale-aware formatting.
- Implemented Live Activities with Dynamic Island, Lock Screen and Home Screen widgets, push notifications via FCM, offline-first caching, Siri shortcuts, a StoreKit 2 subscription model, and full VoiceOver accessibility support. Designed a protocol-oriented architecture with dependency injection, 70+ test suites, and CI/CD automation via Fastlane.

Portfolio Rebalancer Web App | Fintech Automation Platform

Tech Stack: Python (FastAPI), React, PostgreSQL, Docker, Celery, React Native, SwiftUI

- Developed a full-stack portfolio rebalancer with Questrade API integration, implementing secure OAuth 2.0 PKCE & JWT to eliminate manual calculations and deliver one-click automated trades.
- Engineered a scalable backend featuring a modular rebalancing engine (Strategy Pattern) and asynchronous Celery workers; automated containerized deployments via a CI/CD pipeline (GitHub Actions) to ensure system accuracy and efficiency.

EDUCATION

Bachelor of Computer Science | Carleton University

2017-2022

Honours • CyberSecurity Specialization • 4.0 CGPA • Senate Medal (Top 2%)
